IRONWORKS
Designed for Beauty, Built for Strength.

ABOUT US

Palm City Ironworks is a supplier of premium steel, iron, and aluminum door and window systems that are ***designed for beauty, built for strength.***

With headquarters and a flagship showroom in Fort Myers, Florida, and distribution centers in both Fort Myers and Long Beach, Mississippi, we proudly serve dealer partners across the country.

We exist to push the boundaries of what architectural metal can be. From clean, modern sightlines to richly detailed, traditional designs, our products balance modern performance standards with timeless craftsmanship. As our lineup continues to expand, this year we are launching new class-leading products, which include fire-rated systems, bronze doors, stainless steel doors, pivot door configurations and narrow aluminum doors—each engineered with the same attention to detail and durability our partners expect.

At the core of Palm City Ironworks is **STRIDE**—Stewardship, Trust, Relationships, Integrity, Discipline, and Excellence. It's more than a set of values; it's our operating standard and our promise to bring purpose in every step. From sourcing and testing to manufacturing and delivery, we are committed to being a dependable, forward-thinking partner that helps our dealers grow their businesses with confidence.

Palm City Ironworks isn't just building doors—
we're shaping the future of high-performance architectural metal.

SUPERIOR PERFORMANCE

HURRICANE IMPACT CERTIFIED

Several Palm City product lines are hurricane-rated HVHZ for FL Building Code and Texas TDI. Our windows and doors offer certified protection without sacrificing style.

CORROSION PROTECTION

All products are galvanized, utilizing a multiple-step finishing system with an automotive-grade clear-coat sealer. Several products utilize Kynar Paint as their standard finish system.

ENERGY EFFICIENCY

Many of our products utilize Thermal Break technology tested for NFRC Certifications. These products create a thermal barrier between the exterior and interior. This barrier makes it easier to maintain a comfortable temperature in a controlled space without any potential surface condensation.

UNDERSTANDING OUR PRODUCTS

Palm City Ironworks products are backed by a warranty designed specifically for each product line—not a one-size-fits-all policy.

We encourage customers to review the warranty details and consult with their sales representative to ensure the right product is selected for the environment, especially in coastal applications.

From evaluating proper porch overhangs to sharing best practices for installation and maintenance, our team is committed to helping you protect your investment and enjoy lasting performance for years to come.

Please contact your representative for more product details.

URBAN SERIES

TIMELESS AESTHETICS

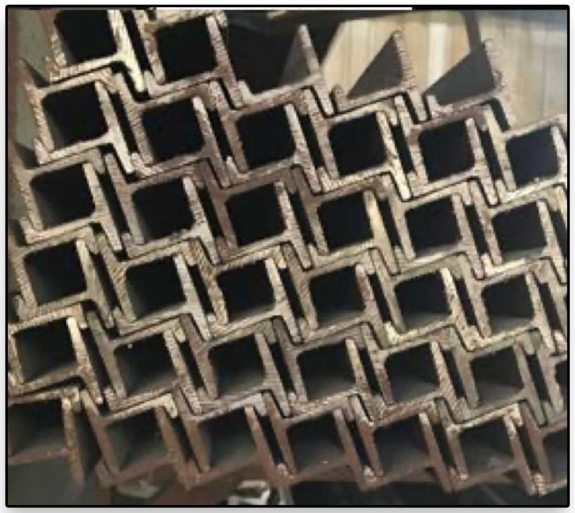
Rooted in a legacy that dates back to the 1850s, Palm City Ironworks' flagship steel systems represent the pinnacle of architectural performance and design. Engineered for today's most demanding environments, this series is offered in the W40 and MTS50 thermally broken profiles, as well as Stainless Steel 316— an exceptional upgrade for coastal and high-exposure applications.

Designed to deliver uncompromising strength and long-term durability, these systems are tested to a design pressure of 80 PSF and carry NFRC certifications, Florida Product Approvals, and Texas TDI certifications.
Refined, narrow sightlines maximize natural light while allowing for a high level of customization across residential and commercial applications.

Blending historic craftsmanship with modern engineering, this is steel at its highest level—

Designed for beauty, built for strength.

MILANO



Our **Milano Series** is crafted using hot and cold-rolled steel profiles. Modern glazing bead and improved weather stripping are included to create the iconic look with modern efficiency.

For exterior doors and more functional windows our **W40** is the right choice. W40 allows for increased depth. The system is perfectly suited for historic building restoration projects, while also meeting the demands of commercial or residential architectural projects.

Our premium upgrade from the W40 is the **Thermally Broken MTS50**, a cold-rolled profile for use in colder climates to provide enhanced energy efficiency.

Additional Features:

- Surface Bolts (req. Impact Doors)
- CA/AW Window hardware included
- Impact Certified Products
  - FL27072, 27073, 27074, 27075 (HVHZ)
- ***Horizontal, Vertical, and Angle Mull Compatible!***

BRONZE SERIES

A noble, ancient and prestigious metal, bronze has always been a favorite material for architects because of its aesthetic characteristics and uniqueness. Architectural bronze is a living, changing material, subject to natural oxidation or weathering that gives it warm tones and variegated nuances, ranging from golden yellow to copper red, from different shades of classic browns to dark browns with the characteristic emergence of copper green.

The natural oxidation process can be accelerated and calibrated by patinating the frame to obtain the chromatic effect most in harmony with the style of the façade and interior, or completely avoided by proceeding directly to a protective finishing treatment, which allows the original golden shine of the material to be maintained. The corners of windows and doors made of Architectural Bronze profiles, once welded, are ground flat to achieve a homogeneous appearance.

This Architectural Bronze is a copper alloy specially designed for extrusion in high precision-production lines. With a compact surface, suitable for bending, satin or polishable, it represents the natural evolution of an ancient material reinterpreted for contemporary architecture.

For **Hardware** options, please refer back to the Milano Section.

B75TB

B40

The **B40** is a complete system that features the same distinctive and evocative design as the Milano W40 series, in the prestigious architectural bronze. Like all copper alloys, architectural bronze is a living material, subject to natural oxidation and therefore acquiring unique and original shades over time.

B40 faithfully replaces doors and windows from different historical periods, or gives an evocative and prestigious twist to modern architecture. The range of profiles allows for the manufacture of many types of opening, and is enriched by a wide choice of traditional and modern design accessories. B40 is also appreciated for high-end internal partitions.

IGNITION

Fire-Rated Series

Fire-Rated W40 Profile

Rooted in the iconic architectural styles of the early 20th century, W40 embodies timeless elegance through clean, minimalist design.

Engineered with elegant steel profiles, the system offers superior strength while allowing for large-format glass with maximized sightlines.

Suitable for Single, Double, Sidelite, and Transom applications.

COMING SOON

Ignition 45 Min featuring Pyrostop Glass

Pilkington Pyrostop® is a clear, laminated, fully insulating fire-resistant safety glass that offers the highest level of fire protection while effectively blocking the transmission of conductive and radiant heat, and maximizing natural light and visibility.

Available for quoting. Taking orders **Summer** of 2026.

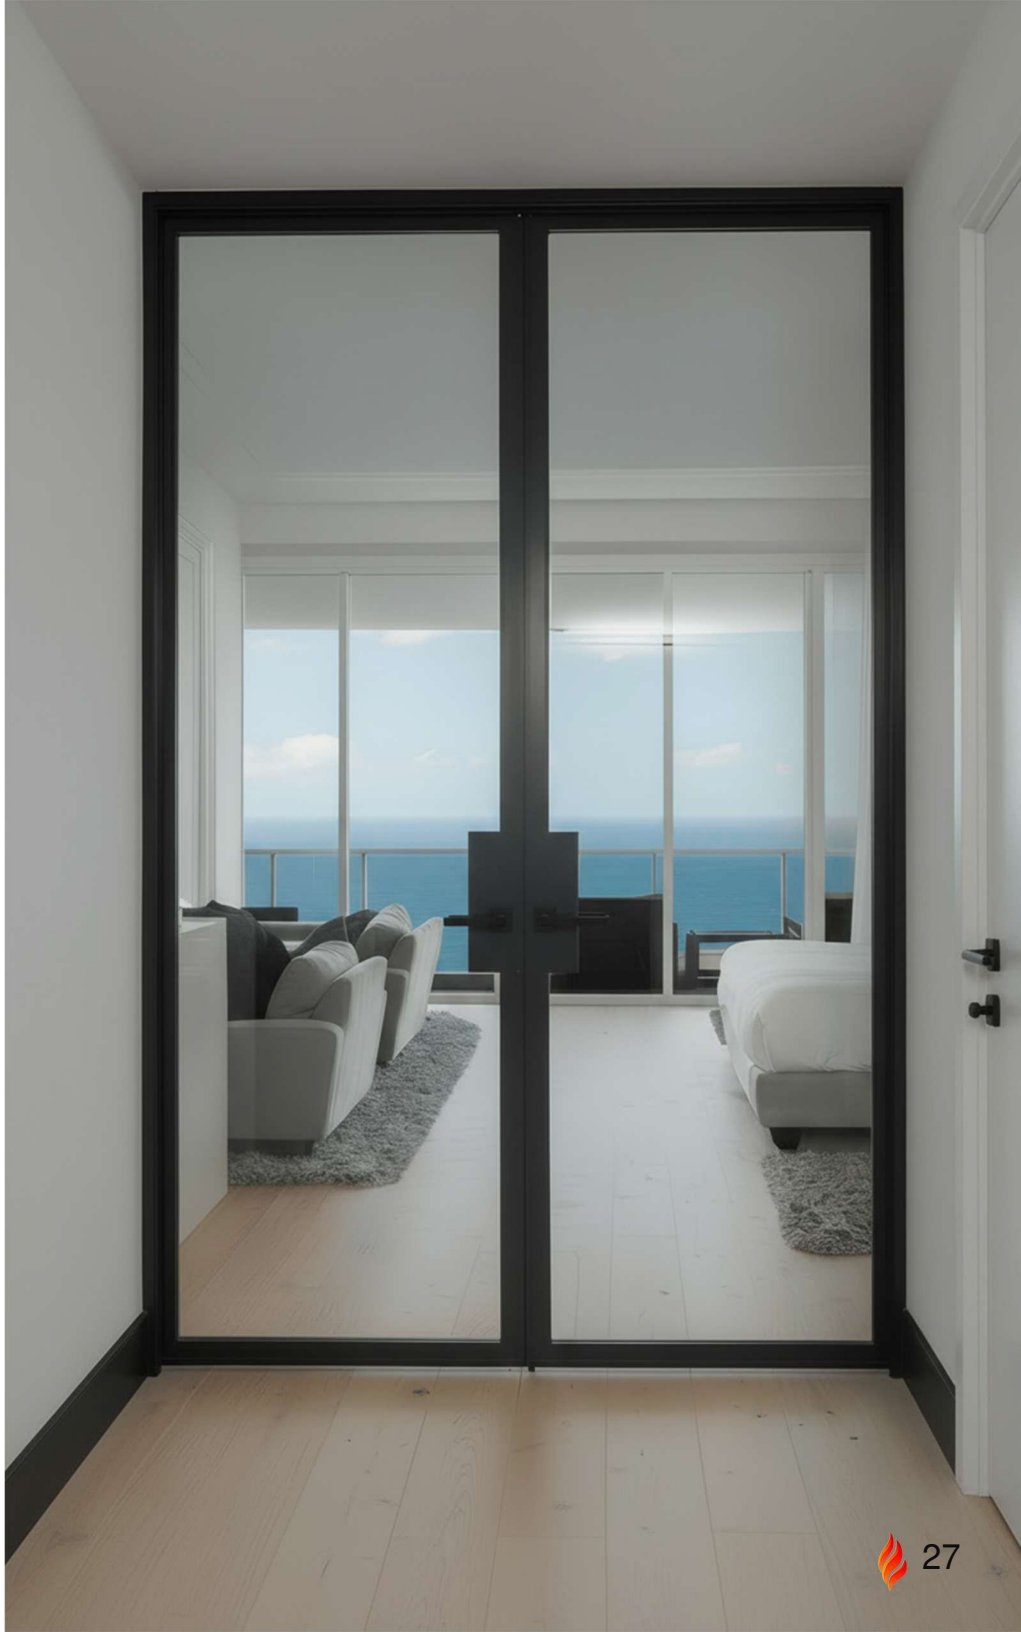
Ideal Applications for Fire-Rated Steel Doors

Fire-rated steel doors are a critical design solution wherever safety, compliance, and architectural integrity must coexist.

They are ideally suited for:
- **Garage to House**
- **Private Entries** in High-Rise Buildings
- **Light Commercial** applications

All variations of the Ignition Series will include concealed closers and a retractable sweep.

This is a massive step within the industry as it allows for a more aesthetic entry while simultaneously meeting local code.



HARDWARE
IGNITION SERIES

The **Schlage L Series** Mortise locks are recommended for High-Rise Private Entries and Light Commercial applications.

The **Schlage PT Series**, a tubular system, is recommended for Garage to House applications.

Regardless of application, all 3 lever options and all 3 finish colors will be available for both series.

MORTISE LOCKS

The **Schlage L Series** is the gold standard for high-traffic, high-expectation openings. Built with a full mortise chassis, solid brass or steel components, and independently tested well beyond residential duty, L Series locks deliver unmatched durability, smooth operation, and long-term reliability.

Upgrading to the Schlage L Series isn't just about security—it's about elevating the entire opening. The Schlage L Series Mortise Lock is available in all 3 finish colors shown on the previous page.

The Schlage L Series has long been the benchmark for heavy-duty mortise locks.

Exceeds Security Grade 1 and Operational Grade 1 ratings

Every Schlage lock undergoes intensive testing to determine its ANSI grade level:

- Cycle tests
- Resistance tests
- Door impact tests
- Warped door tests
- Bolt strength tests

Levers constructed of solid brass or solid stainless steel for a strong-yet-comfortable feel.

Whether the application calls for high abuse resistance or just operation over millions of cycles without degradation in performance, users can trust that this system is dependable.

PIVOT DOORS

Palm City Ironworks' new Pivot Door redefines the front entry as a statement of architecture, engineering, and presence. Crafted from precision-welded steel and balanced on a concealed pivot system, the door moves with a quiet, effortless weight—solid, smooth, and unmistakably intentional.

These doors are derived from two of our iconic series, the Iron Series and Urban Series. The result is an entry that feels both monumental and refined—where strength meets grace, and craftsmanship is felt in every movement.

Each Palm City pivot door is built to order, designed to integrate seamlessly with a wide variety of aesthetics. Ranging from the contemporary minimalist to ornate mediterranean designs. From the first touch to the final close, it delivers what true ironwork should: permanence, precision, and presence.

BEST PRACTICES

When it comes to pivot doors, it is always best to rely on our sales team. It's important for homeowners and builders to know that there are certain overhang requirements for these units.

While they have surpassed the standard for water and air infiltration, we want to be certain that they meet your satisfaction.

*SITE SPECIFIC ENGINEERING AVAILABLE***

HARDWARE

For hardware, glass, and color selections, the Pivot Series will be utilizing the hardware from the series in which the door originated.

For Pivot Iron Doors, please refer to the Iron Door Hardware section.

For Pivot Urban Doors, please refer to the Urban Hardware section.

URBAN
STAINLESS 304

Palm City Ironworks expands its Urban Series with ***Urban 304***—a stainless steel option engineered for elevated coastal living.
Crafted from 304-grade stainless steel, this new offering delivers enhanced corrosion resistance and long-term durability in demanding Gulf Coast environments, where heat, humidity, and salt air are part of everyday life.

Urban 304 maintains the clean lines and architectural presence that define the Urban Series, while offering a refined solution for homeowners, builders, and designers who expect materials to perform as beautifully as they look.
Designed for projects where longevity matters as much as aesthetics, Urban 304 is an investment in strength, resilience, and timeless design.

Urban Series

URBAN INTERIORS

The Urban Series translates seamlessly indoors by bringing architectural steel into refined interior spaces.

Fully customizable and precision-built, each door is tailored to fit openings of any scale—delivering a striking presence whether defining a grand room or elevating a more intimate space.

Built around our signature 2" Urban Series door and panel system, these enclosures feature clean sightlines and a refined architectural presence.

This series has great design flexibility. Options include a door for a walk-in pantry or a custom polygon partition that encloses a homeowners' exquisite wine collection. Available with **Insulated** or **Single Pane** glass.

Minimal by design and intentional in detail, Urban Wine Enclosures deliver a quiet luxury—where craftsmanship, security, and timeless aesthetics take center stage.

URBAN STOREFRONT

URBAN CURVED

Palm City Ironworks introduces ***Curved Glass***—thoughtfully engineered and precision-crafted, curved glass brings a sense of movement and architectural flow to interior spaces, creating visual interest while maintaining clean sightlines and transparency.

Designed to elevate modern interiors, this new option allows designers and homeowners to break away from rigid geometry, offering a more sculptural, custom feel.

Whether used as a statement partition or an elegant showcase for personal treasures between spaces, curved glass delivers a seamless blend of artistry and performance—where craftsmanship meets contemporary design.

URBAN

CORTEN STEEL

COMING SOON

Cor-Ten is a material of great scenic effect and extraordinary elegance. In recent years, it has become a very popular material for windows and doors, both for restoration and for new buildings.

Cor-Ten is a natural, living material that takes on different and unique shades over time and through exposure to the elements.

The natural oxidation process can also be controlled chemically, with procedures that reduce natural “bleeding”. In order to contain these phenomena,
however, it is advisable to plan periodic treatments with applications of suitable waxes or oils.

The corners of the frames are suitably welded, and the welding mark can be left natural or ground flat.
